

## **Transplants based on the location of essences and instincts**

The construction of Therapeutic Spaces has been the guiding axis of my work in recent years. The Therapeutic Bedrooms are the result of an insistence on the bed, the articulation of the bedroom taking into account the combination of door-window-bed-color elements. With Personalized Therapeutic Products I transform the space into a product, which I can shape as I please. I like to customize these cabins taking into account the user, their needs and their desires.

My work must be seen as an interest and a need to locate essences and instincts in the human being. I handle elements such as love, fantasy, pleasure, pain, beauty, sex, madness. I design machines that help me locate these elements: Centrifuge for Love, Centrifuge for Fantasies, Love in the Clouds. Once these elements are located, they are ready to be transplanted: I already have Love Transplants, Fantasy Transplants, Beauty Transplants, Beauty with Extra Green, Blue, Meat Model Beauty Transplants. A Range of Flesh Color, in which I find Natural Flesh Color, Live Flesh, Sad Flesh, Green Flesh.

The action of Transplanting started leads me to a very personal investigation, for the moment everything that I have transplanted is part of me.

The element to transplant that I am working on now is Suicide. Suicide transplants that collect the ambivalence that presents a desire to die and live at the same time.
